The Truth Behind Trapping

Wildlife consultant Camilla Fox interviews Bill Randall, a former Maine trapper.

CAMILLA: Can you please tell us about your history in regards to trapping?

BILL: My father was a novice beaver and muskrat trapper in the 1940s, and I often went with him to set and check traps. Seeing my father chopping through the ice and pulling a beaver up through the hole was as thrilling to me as catching a fish or shooting a deer, which I also did as a young boy. A side benefit of trapping that I quickly learned was the monetary rewards from selling the pelts to Sears and Roebuck. As a 10-year-old, I was absolutely thrilled to receive my first check in the mail for a dozen or so muskrats and a mink. In my adult life, as a novice and sportsman, I continued to trap furbearers into the 1980s—right up until the fur market crash.

I was also a licensed fur buyer in the 1970s and 80s and often had discussions in my fur shop with other trappers about the unintended cruelty of our traps. At times, certain trappers who had developed a trust with me talked about the cats and dogs they caught and how they disposed of them. In my last year of land trapping and the only year that I trapped on land in a built up area, I caught 28 house cats and several dogs. I did not kill the dogs, but I did kill 26 of the cats. I did this upon the request of an Association representative.

I was also a friend of the former IF&W commissioner, a wildlife biologist, and he told me that the coyote snaring could have local benefits and should not be exercised on a state-wide basis. I believe that trying to extend the coyote is counterproductive over a cyclic period of time. IF&W charts conclusively prove that Mother Nature, coexisting with land management practices, is the ultimate manager of wildlife. Men, including our so-called wildlife managers, are merely short term meddlers.

When more than 85 countries have banned the steel jaw leghold trap, do you think it is problematic that this trap is still legal in most US states, and still promoted by the US government?

BILL: As anyone who has been around government for any period of time knows, the government and its agents can be self-serving. Maine’s wildlife managers are so entrenched in tradition that they continue to support hunting and trapping practices that are no longer needed or acceptable by today’s ethical beliefs. Just as the Federal government has sought to exterminate the coyotes by every means imaginable, cruel and otherwise, and at a cost of over $50 million, Maine wildlife managers now use the coyote as their deer management scapegoat. And we must never forget that selling licenses is a monetary factor in their support of the status quo.

Today, the unwritten word among the trappers and some game wardens was that if you released the cats, the owners would know they had been in a trap. The owners would take their beloved pet to a veterinarian and the injured cat would then appear on the front page of the local newspaper, causing bad publicity for trappers and trapping. As trappers, when we were sometimes asked about missing cats, we were advised to say that fishers killed them—in much the same way that we knew as trappers that muskrat and beaver traps must be set to ensure quick drowning. I’ve seen numerous skunks in my land traps that had chewed off a foot. I should mention that a foot was all that was left in the only steel-jawed trap I ever set for a bear. This was in 1958; a year after the $15 bounty was removed.

The thing that bothered me most was seeing a raccoon caught by the front foot in a steel trap that had somehow stripped off all of the skin up to his shoulder in the struggle to free himself. Nothing I saw actually caused me to stop trapping. In my later years, I have simply chosen to speak the truth about traps and trapping. Even though I don’t trap anymore, it is the collectiveness of what I have seen over the years that causes me to continue to speak out.

CAMILLA: Can you tell us about what you saw in the field during your trapping days that perhaps led to your decision to stop trapping?

BILL: Like every trapper who has trapped for a few years, I have seen about everything one can imagine could happen to an animal caught in a trap. I also learned as a young boy, and later as an adult, that traps are not selective. Spring muskrat trapping was abolished for precisely that reason. Just as other muskrat trappers did, I also caught dozens of ducks, numerous blue herons and meadow hens, several owls, and a few pregnant female mink. It is not unusual to see just a muskrat’s foot in a steel trap, even though we knew as trappers that muskrat and beaver traps must be set to ensure quick drowning. of approximately 50 bears, many of which we released. Releasing a bear from the trap always provided a greater thrill for me. If one has the ability to trap a mouse in their house, they can trap a bear. My views on bear hunting and trapping changed drastically after both activities became commercialized, following the IF&W declaration that Maine’s black bear is a big game animal.

Of the many nonresident bear hunters over bait that I guided (I use the term loosely), I quickly learned that hunting was not the reason they came to Maine. Most were braggers and merely wished to kill a bear as a trophy to prove their manliness or hunting prowess. Bear hunters and trappers are a different breed, and I came to find many of them offensive after a period of time. They are not sportsmen as I define sportsmen, who eat what they shoot. A true sportsman is far more thrilled by the ethical, lengthy and challenging pursuit than by the instant of killing of his prey. While a case can be made for the hunting of bear, I know from experience that bear can be hunted in sufficient numbers without resorting to hunting and executing a Pavlov conditioned bear over a bait pile. Maine’s IF&W cannot make a case that the annual trapping of 130 bear is a scientific or a wildlife management issue. And IF&W’s Pavlov conditioned bear over a bait pile. Maine’s IF&W numbers without resorting to hunting and executing a Pavlov conditioned bear over a bait pile. Maine’s IF&W cannot make a case that the annual trapping of 130 bear is a scientific or a wildlife management issue. And IF&W’s argument for justifying the “tradition” of trapping is only as valid as saying that we should continue the practice of selling human beings as we did in the days of slavery because it was a tradition. Should we also go back to the cruel coyote snaring program. I also know that traps and snares are not the select and often times catch non-target animals. Regardless of trapper skills, any trap, foot or killer-type or snares, can and do catch all birds and beasts, wild and domestic.

CAMILLA: It takes a lot of courage to speak out about something you once practiced, but now view as unacceptable and unethical. What is your hope for this issue?

BILL: I’m not sure whether it was courage or rage that finally tipped the scales. Yes, speaking against the interests of a special friend was indeed a painful experience. But I’ve never been a person to follow the crowd just for the sake of following the crowd. And after a 4-year stint as a US Air Force Air Intelligence Operations Specialist, I learned that some of my government agents did not always tell the truth. I now welcome the opportunity to tell the truth, for doing so is an easy task. The truth of traps and trapping is one that needs to be addressed more than ever before. It is time that we learn to love and have compassion for all things.

Brutal dog fighting pits dogs against each other for entertainment purposes. Congress is taking steps to stop this practice.

Dog Fighting Charges Present Opportunity for Action

Following the announcement of dog fighting charges against Atlanta Falcons quarterback Michael Vick in July, the Dog Fighting Prohibition Act was introduced in the US Congress as S. 1880 and H.R. 3219. The bill seeks to further empower federal prosecutors to pursue individuals—including spectators—engaged in all aspects of dog fighting. It would increase maximum penalties to include up to five years in federal prison. While public awareness of this barbaric act is at an all-time high, Congress must take prompt action.

Despite most Americans’ horror at the situation, some people have stepped up in Vick’s defense. The Animal Welfare Institute (AWI) spoke out against the argument that the abused dogs were “private property”—and thus Vick’s behavior was acceptable. The private property or “private rights” claim is a common but dangerous mindset frequently espoused by elected officials to justify cruelty to animals in the form of barbaric activities such as animal fighting and horse slaughter for human consumption. 

YOU CAN MAKE A DIFFERENCE

Please ask your Senators and Representative to cosponsor S. 1880 and H.R. 3219, the Dog Fighting Prohibition Act. Write to:
