

4 FAST FACTS ON HOUNDING

1

Hounds are a threat not only to the targeted species, but also to moose calves, ground nesting birds, and other wildlife.

2

Hounders are often miles away from their radio-collared hounds and have little to no control over them.

3

Hounds terrorize wildlife until the exhausted animal either climbs a tree or is cornered, often resulting in injury or death.

4

Hounding violates landowner rights and places people, their pets, and livestock in danger.
